Death certificates – Tasmania

The Medical Certificate of Cause of Death (MCCD), or 'death certificate', is an important legal document required to notify deaths to the registrar of births, deaths and marriages in each state or territory.

The form of the MCCD may be slightly different in each jurisdiction. The death certificate will be provided directly to the registrar of births, deaths and marriages and in some cases, such as in Western Australia, to the person responsible for organising the disposal of the body.

To complete a death certificate, you must be 'comfortably satisfied' about the cause of death and that the circumstances of the death do not constitute a 'reportable death' to the coroner.

Who can sign?

If you were responsible for a patient's care immediately prior to death, or you saw the deceased after death and you are satisfied about the cause of death, you can sign the death certificate.

At times, you may be required to sign a death certificate for a patient you don't know or have not seen for a while. There is no legal requirement for you to have had recent contact with the patient, but you do need to have enough information based on the history (e.g. review of the medical records or discussion with the treating doctor) or an examination to provide a cause of death.

Sometimes a doctor will be asked to provide a death certificate and a cremation certificate. The requirements for cremation certificates are outlined below.

Requirements to sight the body for a death certificate (in some states, there are also requirements for cremation)

In Tasmania, a doctor must sight the body in order to issue an MCCD.

A practitioner who attends a place of death must issue an MCCD if he or she is satisfied that the person is in fact dead, that the death is not a reportable death pursuant to the *Coroners Act 1995* and that an identification tag is attached to the human remains.

When not to issue a death certificate

Reportable deaths must be notified to the coroner or police and no death certificate issued. The circumstances vary slightly between the states and territories, however generally they include:

- ▶ any violent or unnatural death
- ▶ sudden death of unknown cause
- ▶ death under suspicious or unusual circumstances
- ▶ if the deceased person was a child or person in care or custody
- ▶ where a doctor has been unable to sign a death certificate giving the cause of death
- ▶ where the identity of the person who has died is not known.

And in addition in Tasmania:

- ▶ death while under, or as a result of, or within a period of time of administration of anaesthetic
- ▶ following an accident that may have caused the death (this includes Work Cover).

If you report a person's death to the coroner, you should not complete a death certificate.

Completing the death certificate

The MCCD is recommended by the World Health Organisation for international use. All Australian states and territories have similar but not identical versions of this. The death certificate also includes demographic information, which is used in collating statistics.

The MCCD has two parts:

Part I is about the disease or condition directly leading to death. Part I also includes any antecedent (precursor) causes giving rise to the disease or condition leading to death.

Part II is for any other significant conditions contributing to the death, but not related to the disease or condition causing it.

Each of these two parts includes an approximate interval between the onset of these conditions and the death.

Once the MCCD is completed it should be forwarded to the Registry of Birth, Deaths and Marriages (except in Western Australia, where this job is done by the funeral home or the person organising disposal of the body).

If, for any reason, you are uncomfortable about providing a death certificate, you should seek expert legal advice from Avant.

What is different about perinatal deaths?

Perinatal deaths require a separate Medical Certificate of Cause of Perinatal Death or perinatal death certificate. This certificate should be used for a stillborn child of at least 20 weeks' gestation (or if the period of gestation cannot be reliably established, a child with a body mass of at least 400 grams at birth). A perinatal death certificate is also required for a live born child who dies within 28 days of birth.

The perinatal death certificate should be completed by or under the supervision of the consultant responsible for care.

Cremation certificates

The body of a deceased person cannot lawfully be cremated until the necessary certificates and permits have been obtained.

In all jurisdictions, there are strict limitations on when cremation can take place. Generally, a practitioner who attended the deceased patient ('attending practitioner') and a second, independent practitioner (sometimes described as an 'authorising practitioner', 'medical referee' or 'licensed medical practitioner') must first certify the cause of death and secondly the fact that it is appropriate for the body to be cremated. Sometimes more than one document is required; for further details refer to your state-specific information.

The coroner can also provide permission for the body to be cremated.

The form of the certification varies depending on the jurisdiction, as do the regulations regarding who qualifies as an attending practitioner or independent practitioner.

An attending practitioner will usually be the deceased's treating doctor, or the doctor who has examined the body and provided a death certificate.

You should only sign the attending practitioner's cremation certificate if you are satisfied that the cause of death has been identified and there are no circumstances requiring the coroner to investigate. If you are acting as the independent practitioner, you may provide a certificate if you are appropriately licensed or qualified (if required) and if you have carried out the investigations set out in the forms required for your state or territory.

Generally, this will include an examination of the body, reviewing the relevant medical records and being satisfied that the cause of death recorded by the attending practitioner is correct and that there is no call for further investigation. You may also need to be sure that the cremation does not pose a risk to any person by certifying that there is no pacemaker or other battery-powered device present in the body.

A cremation certificate must never be signed if:

- ▶ there is the possibility that further investigations into the cause of death are required
- ▶ you are aware that the deceased did not wish to be cremated
- ▶ you are aware that someone such as a personal representative or close family member of the deceased has objected to the cremation.

You cannot provide an independent practitioner's certificate, even if you are qualified to do so, if you have already provided the attending practitioner's certificate.

Patient medical records

Document all aspects of the death certificate and cremation certificate process in the patient record, particularly if you decide not to complete a certificate because you are uncertain about the cause of death.

The patient's records remain confidential following death and access to a third party can generally only be granted with permission of the executor or administrator of the estate of the deceased or by an order of the court.

Remember, when asked to complete a death certificate:

- ▶ write clearly in block letters
- ▶ contact the coroner if you cannot sign the certificate or have doubts
- ▶ seek advice from Avant if you are unsure about the process.

Tasmania – Specific information

Forms required	<p>1. Medical Certificate of Cause of Death And for cremations: 2. Cremation permit</p>		
Legislation	<p><i>Births, Deaths and Marriages Registration Act 1999</i> <i>Burial and Cremation (Handling of Human Remains) Regulations 2005</i> <i>Burial and Cremation (Cemetery) Regulations 2005</i> <i>Coroners Act 1995</i></p>		
Requirements	<p>Medical Certificate of Cause of Death (MCCD)</p> <p>A doctor who is notified of a death must attend the place of death, arrange for another practitioner to attend the place of death or arrange for a 'responsible person' (i.e. a nurse or a paramedic) to attend the place of death within eight hours of receiving the notification.</p> <p>A practitioner who attends a place of death must issue an MCCD if he or she is satisfied that the person is in fact dead, the death is not a reportable death pursuant to the <i>Coroners Act 1995</i> and an identification tag is attached to the human remains.</p> <p>A medical practitioner who is responsible for a person's medical care immediately before death or who examines the body of a deceased person after death must notify the Registrar of Births, Deaths and Marriages. The report to the registrar must be made in the prescribed form and within 48 hours of the death.</p> <p>The doctor who completed the death certificate is also required to give the certificate to the funeral director or other person who will be arranging for the disposal of the human remains.</p> <p>Application for cremation permit</p> <p>The next of kin to the deceased may apply to a medical practitioner for a permit authorising the cremation of the deceased person.</p> <p>The regulations state that a medical practitioner must not grant the application and issue a cremation permit in respect of a deceased person if he or she:</p> <ul style="list-style-type: none"> ▶ is the senior next of kin of the deceased person ▶ is related by marriage to a person who is the senior next of kin of the deceased person ▶ is a partner or an employee of the medical practitioner who issued the death certificate ▶ was, immediately before the death, a partner or an employee of the deceased person ▶ has issued the death certificate ▶ has pecuniary interest in the estate of the deceased. <p>The medical practitioner may, with the consent of the next of kin, obtain medical records of the deceased, allow another medical practitioner access to those records, and make necessary inquiries for consideration in the application for cremation permit.</p> <p>The medical practitioner must grant an application for cremation permit if, after having examined the deceased person, he or she is satisfied that:</p> <ul style="list-style-type: none"> ▶ a death certificate has been issued ▶ the cause of death listed in the death certificate is accurate ▶ the death is not a reportable death pursuant to the <i>Coroners Act 1995</i> ▶ any implanted medical device has been removed. <p>If the medical practitioner grants an application without being satisfied of the matters listed above, a fine can be issued.</p>
